

## CARRIER

# Partech Bike Carrier

Range of mountain bike transport solutions, compatible with chairlifts and gondola lifts. Easy installation and customer use; protects the equipment.

**10,000** mountain bike racks already installed since 2010

Partech has **30 years of experience** in the ski lift industry

**100% French** design and manufacture

The mountain **all year round**

**Simple and robust** solutions

**Simple and limited** maintenance

**1** patent

Partech mountain bike racks offer a wide range of mountain bike transport solutions that are compatible with chairlifts and gondola lifts.

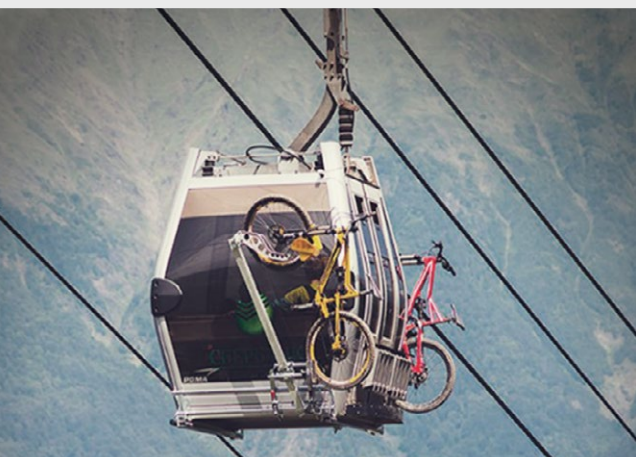

Their highly modular design makes them quick to assemble and disassemble in any season and easy for customers to use, while fully protecting the equipment.

They can be fitted to the side or rear of the chairs. For cabins, they can be fitted on the sides, at the back or at the front.

Compatible with new and existing ropeways

## FEATURES & BENEFITS

### › Features and performance

- Transport mountain bikers and their bike at the same time
- Contribute to the transition to the “mountain all year round”
- Compatible with all types of mountain bikes
- Only the bike tyre is in contact with the mountain bike rack = the equipment transported is protected
- Wide range of mountain bike racks to adapt to the desired capacity
- Lightweight system

### › Operation and Maintenance / Safety

- Simple and fast loading and unloading of mountain bikes
- Simple assembly and disassembly
- Simple and efficient configuration = very little maintenance, a simple visual inspection by the operator is enough

### › Certification

- POMA-Partech partnership with the aim of designing mountain bike racks compatible for use with chairs and cabins, but also with the dimensions when passing through stations and on the towers.
- Validation of interfaces as part of ropeway transport system certification, in the form of a joint POMA-Partech service

## RANGE

### › BACK RACK

Designed for chairlifts requiring greater capacity. It can be used to carry 2 to 3 mountain bikes in complete safety, without causing the chair to become unbalanced.

### › SINGLE RACK

Designed to transport mountain bikes safely behind the chair, when the desired mountain bike capacity is low.

### › CAB RACK

Designed to transport 2 mountain bikes safely on the outside of the cabins without causing a lateral imbalance of the cabin.

The mountain bikes are placed on the upstream and downstream sides of the cabin.
